

# Continuous delivery with Azure Web Apps

---

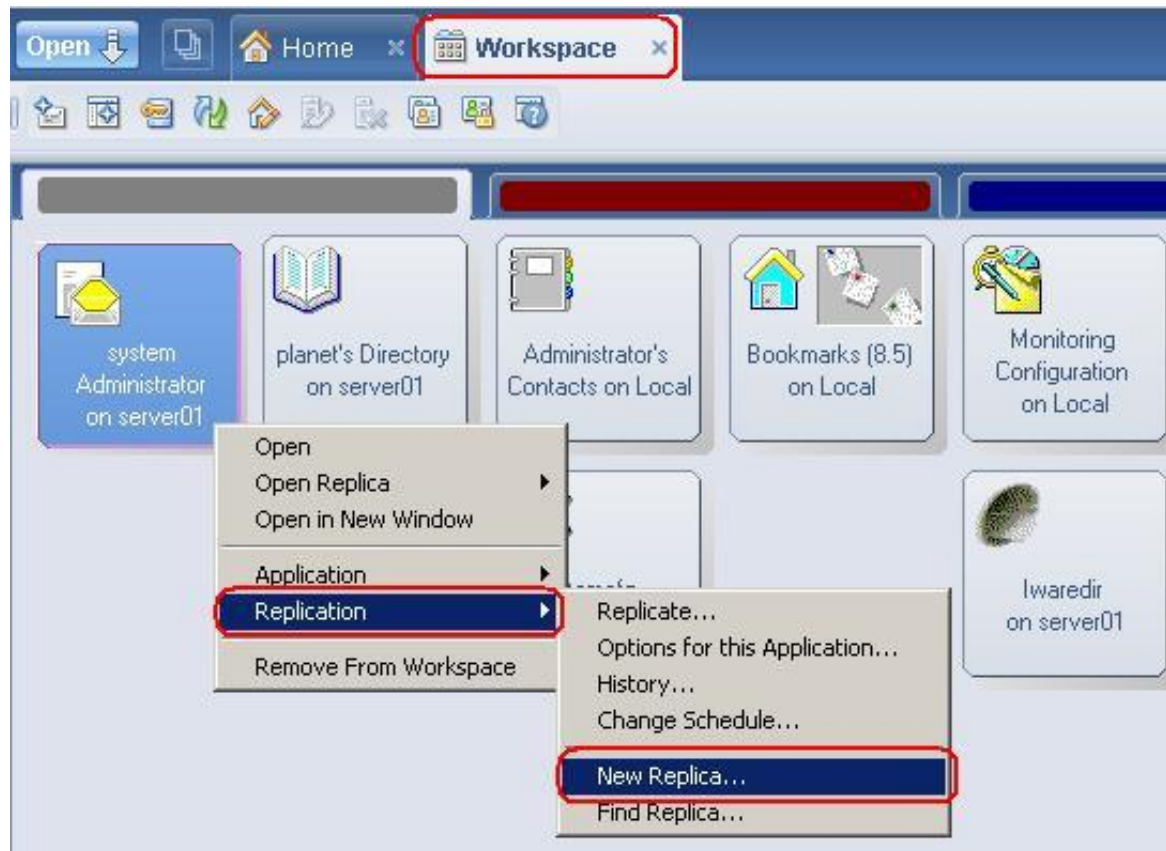

Vidar Kongsli

---

Øredev 2017

**bredvid**

# Deployment in the nineties

# Lean software development

- Deliver as fast as possible
  - *Rapid delivery allows some customers to delay decisions, and for others rapid delivery means quicker gratification. For customers of software development, rapid delivery often translates to increased business flexibility*
- Build integrity in
  - *The way to build a system with high [...] integrity is to have excellent information flows both from customer to development team and between the upstream and the downstream processes of the development team*

# Principles of software delivery\*

1. Create a repeatable, reliable process for releasing software
2. Automate almost everything
3. Keep everything in version control
4. If it hurts, do it more frequently, and bring the pain forward
5. Build quality in
6. Done means released
7. Everybody is responsible for the delivery process
8. Continuous improvement

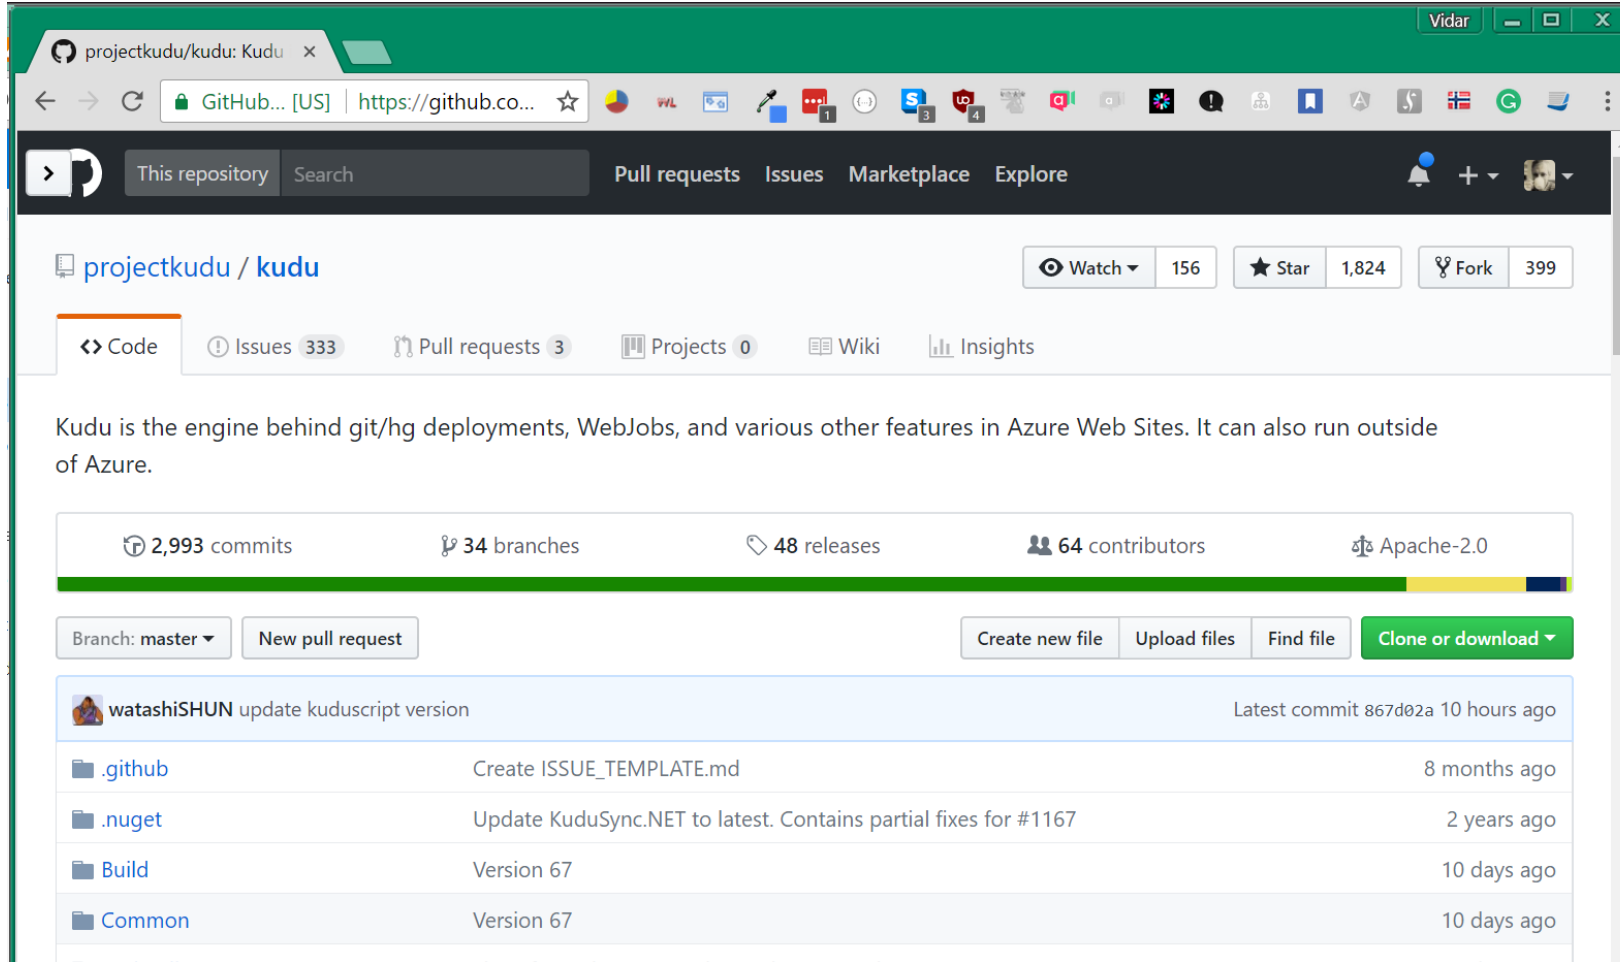

# Kudu

The screenshot shows the GitHub repository page for `projectkudu/kudu`. The browser address bar shows the URL `https://github.com/projectkudu/kudu`. The repository name `projectkudu / kudu` is displayed at the top. Below the repository name, there are statistics: 156 Watchers, 1,824 Stars, and 399 Forks. The repository is categorized under `Code`, with 333 Issues, 3 Pull requests, 0 Projects, Wiki, and Insights. A description states: "Kudu is the engine behind git/hg deployments, WebJobs, and various other features in Azure Web Sites. It can also run outside of Azure." Below the description, repository statistics are shown: 2,993 commits, 34 branches, 48 releases, 64 contributors, and Apache-2.0 license. A green progress bar indicates the repository's activity. The `Branch: master` dropdown and `New pull request` button are visible. The `Create new file`, `Upload files`, `Find file`, and `Clone or download` buttons are also present. The commit history table shows the latest commit by `watashiSHUN` updating the kudu script version, with a commit hash of `867d02a` and a timestamp of 10 hours ago. The table also lists other commits, including the creation of `ISSUE_TEMPLATE.md` 8 months ago, and updates to `KuduSync.NET` 2 years ago, and `Build` and `Common` files 10 days ago.
